Chapter 1

PopupMenu

Shows menu with title, help message and some buttons

Figure 1.1: PopupMenu in action

This project was created to simplify common task - create and show menu.

There is possibility to change title, text of help, remove and add menu items, to hide and show menu.

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

ButtonListener	
PopupMenu	9

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

PopupMenu	Creates popup menu with title, help message and some buttons	9
---------------------------	--	---

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

PopupMenu.cpp	15
PopupMenu.h	
Contains PopupMenu class	15

Chapter 5

Class Documentation

5.1 PopupMenu Class Reference

Creates popup menu with title, help message and some buttons.

```
#include <PopupMenu.h>
```

Inheritance diagram for PopupMenu:

Public Member Functions

- `PopupMenu` (Screen *screen, String helpMessage="select item", String menuTitle="")
Default constructor.
- `~PopupMenu` ()
Default destructor.
- void `show` ()
Show current menu.
- void `hide` ()
Hide current menu.
- void `addMenuItem` (const String menuItemName)
Add one item to menu.
- void `clearMenuItems` ()
Clean all menu items.
- void `setMenuHelpMessage` (const String helpMessage, const int justification=-1)
Set help message of menu.
- void `setMenuTitle` (const String menuTitle)
Set menu title.
- void `resetReturnCode` ()
Reset menu return code.
- void `setCallback` (void(*callback)(int))
Callback function transmitting int parameter which represent 0-based index of selected menu item.
- void `setCallback` (void(*callback)(String))
Callback function transmitting text of selected item.

Public Attributes

- int `result`
Index of pressed menu item.

Private Member Functions

- void `createUI` ()
Create menu layout.
- void `createMenuButtons` ()
Create menu items buttons.
- int `getButtonIndexByName` (Button *button)
Extract menu button index by its name.
- virtual void `buttonClicked` (Widget *button)
React on menu button pressure.

Private Attributes

- Dialog * `dlg`
Main menu dialog to store all UI.
- QVBoxLayout * `vl`
- Label * `lbHelpMessage`
Label widget to store menu help message.
- QVBoxLayout * `vlButt`
- Screen * `parentScreen`
Pointer to parent screen.
- Vector< String > `menuItemNames`
Vector of strings to store text representation of menu items.
- void(* `intCallback`)(int)
Pointer to callback function with integer parameter.
- void(* `strCallback`)(String)
Pointer to callback function with String parameter.

5.1.1 Detailed Description

Creates popup menu with title, help message and some buttons.

Note

Callback edition.

Author

fatINbraIN

Version

1.0

Usage

in class definition:

```
PopupMenu* popupMenu;
```

setup menu

```
popupMenu->clearMenuItems();
popupMenu->addMenuItem(string_to_add);

popupMenu->setCallback(menuCallbacker);
popupMenu->setCallback(menuCallbackerStr);
```

to call menu:

```
popupMenu->show();
```

Callback functions

void callbackInt(int index); – for integer index of selected menu item (zero-based).

void callbackStr(String str); – for string of selected menu item.

5.1.2 Constructor & Destructor Documentation**5.1.2.1 PopupMenu::PopupMenu (Screen * *screen*, String *helpMessage* = "select item", String *menuTitle* = " ")**

Default constructor.

Parameters

<i>screen</i>	Parent screen.
<i>helpMessage</i>	Menu informational string.
<i>menuTitle</i>	Title of menu.

5.1.2.2 PopupMenu::~~PopupMenu ()

Default destructor.

5.1.3 Member Function Documentation**5.1.3.1 void PopupMenu::addItem (const String *menuItemName*)**

Add one item to menu.

Parameters

<i>menuItemName</i>	String representing new menu item.
---------------------	------------------------------------

Note

If menuItemName is empty string, this menu item will be invisible.

5.1.3.2 void PopupMenu::buttonClicked (Widget * *button*) [private], [virtual]

React on menu button pressure.

5.1.3.3 void PopupMenu::clearMenuItems ()

Clean all menu items.

5.1.3.4 void PopupMenu::createMenuButtons () [private]

Create menu items buttons.

Note

Here you can customize menu buttons look.

5.1.3.5 void PopupMenu::createUI () [private]

Create menu layout.

Note

Here you can customize menu look.

5.1.3.6 int PopupMenu::getButtonIndexByName (Button * *button*) [private]

Extract menu button index by its name.

5.1.3.7 void PopupMenu::hide ()

Hide current menu.

5.1.3.8 void PopupMenu::resetReturnCode ()

Reset menu return code.

5.1.3.9 void PopupMenu::setCallback (void(*)(int) *callback*)

Callback function transmitting int parameter which represent 0-based index of selected menu item.

Parameters

<i>callback</i>	Pointer to callback function.
-----------------	-------------------------------

5.1.3.10 void PopupMenu::setCallback (void(*)(String) *callback*)

Callback function transmitting text of selected item.

Parameters

<i>callback</i>	Pointer to callback function.
-----------------	-------------------------------

5.1.3.11 void PopupMenu::setMenuHelpMessage (const String *helpMessage*, const int *justification* = -1)

Set help message of menu.

Parameters

<i>helpMessage</i>	String to set as help menu.
<i>justification</i>	Help message justification -1left, 0center, 1right

5.1.3.12 void PopupMenu::setMenuTitle (const String *menuTitle*)

Set menu title.

Parameters

<i>menuTitle</i>	String to set as title.
------------------	-------------------------

5.1.3.13 void PopupMenu::show ()

Show current menu.

5.1.4 Member Data Documentation**5.1.4.1 Dialog* PopupMenu::dlg [private]**

Main menu dialog to store all UI.

5.1.4.2 void(* PopupMenu::intCallback)(int) [private]

Pointer to callback function with integer parameter.

5.1.4.3 Label* PopupMenu::lbHelpMessage [private]

Label widget to store menu help message.

5.1.4.4 Vector<String> PopupMenu::menuItemNames [private]

Vector of strings to store text representation of menu items.

5.1.4.5 Screen* PopupMenu::parentScreen [private]

Pointer to parent screen.

5.1.4.6 int PopupMenu::result

Index of pressed menu item.

Note

Zero-based.

5.1.4.7 void(* PopupMenu::strCallback)(String) [private]

Pointer to callback function with String parameter.

5.1.4.8 `VerticalLayout* PopupMenu::vl` `[private]`

5.1.4.9 `VerticalLayout* PopupMenu::vlButt` `[private]`

The documentation for this class was generated from the following files:

- [PopupMenu.h](#)
- [PopupMenu.cpp](#)

Chapter 6

File Documentation

6.1 Doxyfile.dox File Reference

6.2 PopupMenu.cpp File Reference

```
#include "PopupMenu.h"
```

6.3 PopupMenu.h File Reference

Contains [PopupMenu](#) class.

```
#include <MAUtil/String.h>
#include <MAUtil/Vector.h>
#include <NativeUI/Widgets.h>
```

Classes

- class [PopupMenu](#)
Creates popup menu with title, help message and some buttons.

6.3.1 Detailed Description

Contains [PopupMenu](#) class.
